

Syntax and Grammar exercises

1. Textbook, page 247, Problem 6.14 (a), (c), and (d). Give a leftmost derivation for each and draw a parse tree.
2. Textbook, page 246, Problem 6.5 (a)
3. Consider the following BNF grammar rules:

$\langle \text{pop} \rangle \rightarrow [\langle \text{bop} \rangle, \langle \text{pop} \rangle] \mid \langle \text{bop} \rangle$

$\langle \text{bop} \rangle \rightarrow \langle \text{boop} \rangle \mid (\langle \text{bop} \rangle)$

$\langle \text{boop} \rangle \rightarrow x \mid y \mid z$

for each of the following strings give a leftmost derivation and draw a parse tree. If no such derivation is possible, indicate this

a. (y)

b. $[y]$

c. $[(x), y]$

d. $[(x), [z, x], ([z])]$

4. Consider the following grammar

$\langle \text{assign} \rangle \rightarrow \langle \text{var} \rangle = \langle \text{expr} \rangle$

$\langle \text{expr} \rangle \rightarrow \langle \text{term} \rangle \mid \langle \text{expr} \rangle + \langle \text{term} \rangle \mid \langle \text{expr} \rangle - \langle \text{term} \rangle$

$\langle \text{term} \rangle \rightarrow \langle \text{primary} \rangle \mid \langle \text{term} \rangle * \langle \text{primary} \rangle \mid \langle \text{term} \rangle / \langle \text{primary} \rangle$

$\langle \text{primary} \rangle \rightarrow \langle \text{var} \rangle \mid \text{const} \mid \langle \text{expr} \rangle$

$\langle \text{var} \rangle \rightarrow \langle \text{identifier} \rangle \mid \langle \text{identifier} \rangle [\langle \text{sublist} \rangle]$

$\langle \text{sub_list} \rangle \rightarrow \langle \text{expr} \rangle \mid \langle \text{sub_list} \rangle, \langle \text{expr} \rangle$

$\langle \text{identifier} \rangle \rightarrow \text{id}$

assume here that **id** is a lexical analyzer's classification of a non-reserved name (such as might be used for a variable or function), and that **const** represents a lexical analyzer's classification of a number.

Construct parse trees for the following expressions:

a. $B = A[X] + 1$

b. $B = A[X + 1]$

c. $X = U - V * W + X / Y$
